

INDEX OF NAMES

This finding aid is based on the index in the 1981 edition of the Book of Mormon, but because this index includes several names that were missed in 1981 and omits biblical figures who do not appear in the Nephite record, a few of the subscripts are different. Approximate dates have been provided for most individuals (except for Jaredites), rounded off to the nearest ten. Biblical kings, however, appear with precise reign years derived from standard scholarly chronologies. The reference is to the first appearance of the name in the Book of Mormon. Jaredite kings usually have two references, the first to the genealogy in Ether 1 and the second to their first mention in the narrative. Brackets enclose variant spellings from the original or printer's manuscripts.
